

Go wherever you want.

And say "goodbye" to flat tyres forever!

SOFT CUSHIONED RIDE

Semi-Pneumatic Technology provides optimum shock absorption and a smooth, air-cushioned ride.

INCREASED STABILITY

The extra weight of the tyres increases machine stability and reduces bouncing.

EASY INSTALLATION

Tyres come with rims for easy installation.

100% PUNCTURE PROOF

TUFFTYRE DT

Designed to perform in all off-road applications. The deep lugs deliver unrivaled traction not only in regular dirt but also in deep mud, sand and rubble.

TUFFTYRE AT

Designed for hard surfaces such as asphalt, pavement, and concrete. The tread pattern is designed to make more contact with the surface, thus reducing ground pressure and significantly extending the life of the tyre. Ideal for scrap yards, demolition sites, and various tough on-road applications. Equally suitable for work in warehouses, convention centers and other indoor job sites.

Puncture-Proof Natural Rubber

Heavy-duty rubber compound lasts 5 to 7 times longer than pneumatic tyres and is totally puncture proof.

Deeper Tread

Extra deep self-cleaning tread provides superior traction in deep mud, sand or rubble.

Cushion Holes

Up to three layers of deep cushion holes prevent damage to the machine on the roughest terrain.

Sidewall Protection

Specially engineered sidewalls prevent punctures and snags in severe cutting conditions.
